

Here in Alaska we have had experience with telehealth for quite a few years. The Secure Telehealth system is easily set up, secure, and quite simple to use, even for agencies without prior knowledge of any systems. Secure Telehealth has been an efficient organization to work with. Through Secure Telehealth we were able to establish tele-communications to enable us to complete client intakes via a computer portal out of state. This advanced patient access was secure, confidential, and worked very effectively to deliver state of the art, timely services for our clients.

Destiny Sargeant, PhD, [Southeast Alaska Regional Health Consortium](#) (SEARHC)
